

BUSINESS CONTINUANCE WITHIN REACH

Remote Instant Replay in combination with Data Instant Replay provides powerful business continuance. This combination enables large and small enterprises to quickly implement business continuance strategies that were previously too expensive or complex.

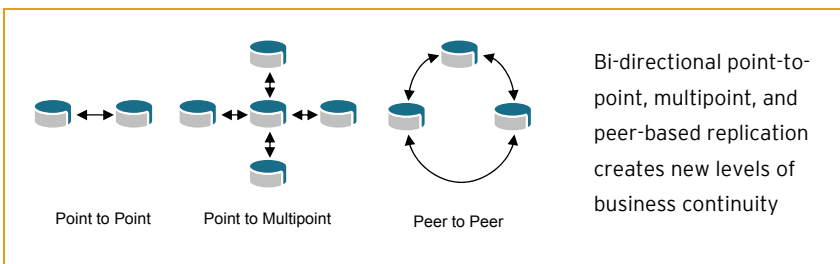

MATCHED OR SPLIT REPLAYS

Create any combination of point in time copies, called Replays, between local and remote data centers. Establish frequent local replays, with periodic replication to a remote location, implementing business continuance practices that meet your business needs.

REDEFINE TRADITIONAL BACKUP

Create Remote copies automatically and simultaneously to multiple sites. Creating multiple online remote copies with Remote Instant Replay leapfrogs traditional tape recovery strategies.

Capabilities

- Remote replication of individual Replays or entire volumes
- Point-to-point, point-to-multipoint, and peer-to-peer architecture
- Matched or split Replay increments between sites
- Flexible user interface creates powerful Replay templates without complex scripting

Benefits

- Business Continuance solutions for all budget levels
- Feasible Remote Replication for a wide range of businesses, from small to large enterprises
- Online copies of data at multiple simultaneous locations redefines traditional backup
- Active-active topology maximizes utilization

THE COMPELLENT ADVANTAGE

- Remote Instant Replay brings remote replication to companies that previously considered off-site replication too complex and expensive
- Create remote Replays using only the actual written data, maximizing performance and optimizing channel bandwidth and cost
- Web-based intuitive interface provides creation of powerful replication templates without complex scripting

About Compellent

Compellent delivers modular storage area networks (SANs) – exclusively through business partners – that every company can afford and any administrator can use.

© Compellent DS-RIRP-01-010804

Standard features

- Fast Remote Replay creation using efficient copy-on-write technology
- Bi-directional, different Replay intervals between sites
- Active/active configuration between sites
- Any Compellent configuration at any location
- Encryption using 3DES/AES (TBD)
- Connectivity: T1 through OC48 supported
- Rate limiting (TBD)
- Synchronous and asynchronous replication modes
- VTS (virtual tape services)
- Replication over Fibre Channel or TCP/IP
- Overlapped commands

Scaling

- Configurations: Point-to-point, Multipoint, and Peer-to-peer supported
- Compression ratios of XX:1 to XX:1 (TBD)
- Unlimited Replays
- Unlimited number of protected volumes
- Unlimited volume size
- Unlimited branching using writeable Replays
- Keep remote Replays for unlimited time periods without performance degradation

Management

- Wizard-based setup and recovery
- Phone-home status notification
- Import/export Replay templates
- Automatically manage expired Replays
- Integration with Microsoft's VSS (Volume Shadow copy Services)
- Remote and local web based monitoring
